

**JUST
ONE CUT**

WHAT IS SINGLE INCISION LAPAROSCOPY

- ❖ Single Incision Laparoscopy, or Single Port Surgery, or Laparo-Endoscopic Single Site Surgery (LESS), is the latest and more advanced form of key hole surgery.
- ❖ Major surgery is done with **Just ONE Cut** (of 2-3cm) at the umbilicus.
- ❖ A multichannel single incision port is placed at the umbilicus incision to allow multiple instruments to perform surgery inside the abdomen.
- ❖ This Minimally Invasive Surgery technique is possible with cutting edge surgical technology and highly advanced surgical skill.

**EXCELLENT
RESULTS**

WHAT ARE THE BENEFITS

- ❖ Excellent aesthetic result as the single 2-3cm cut heals into an inconspicuous fold
- ❖ Less pain from the 2cm cut as compared to traditional surgery of a 10cm cut
- ❖ Less infection and surgical wound breakdown
- ❖ Less risk to blood vessels injury
- ❖ Less adhesion formation (post surgery internal scarring) and a better fertility potential
- ❖ Faster recovery and shorter hospital stay

**SINGLE INCISION
FOR YOU**

WHAT SURGERIES CAN BE DONE

Single Incision Laparoscopy is possible for conditions that are not too large or severe like

- ❖ ovarian cyst removal (Cystectomy)
- ❖ fibroid removal (Myomectomy)
- ❖ womb removal (hysterectomy)
- ❖ fertility investigation (hydrotubation)
- ❖ sterilization procedure (ligation / salpingectomy)
- ❖ ovarian cancer risk reduction (prophylactic oophorectomy)

As every condition is unique, a thorough assessment will be done to check if Single Incision Laparoscopy is suitable for you.
